

## Chive harvesters

### Mounted/Trailed/Selfpropelled

**STM-100PU, T-200PU and SP-200PU, SP-400PU**, is after year long experience, one of the best harvesters for chives. The machines can be used for harvesting and loading into boxes, where the chives have the fully length or where the chives have been cutted into small pieces.

A suction fan is mounted to raise the chives, which lays down. This is normally used in the middle of the day, where the chives are dry and where the weight is very low.

Equipment for cutting of the top of the chives (yellow tops), can also be mounted.

To ensure the best solution for Your own requirements, we recommend You to contact Your nearest importer or ASA-LIFT direct.

## Products specifications

### Mounted/Trailed/Selfpropelled

- Fully hydraulic driven machines
- Cutting system with automatic hight control
- Possibility for cutting equipment, when direct topping on the machine
- Suction fan for lifting the chives
- The machines can be made to harvest into 25 - 500 kilo boxes, or into hoppers
- Equipment for cutting yellow tops
- The machines are build with a strong frame construction
